TRANSFORMING TRAVEL

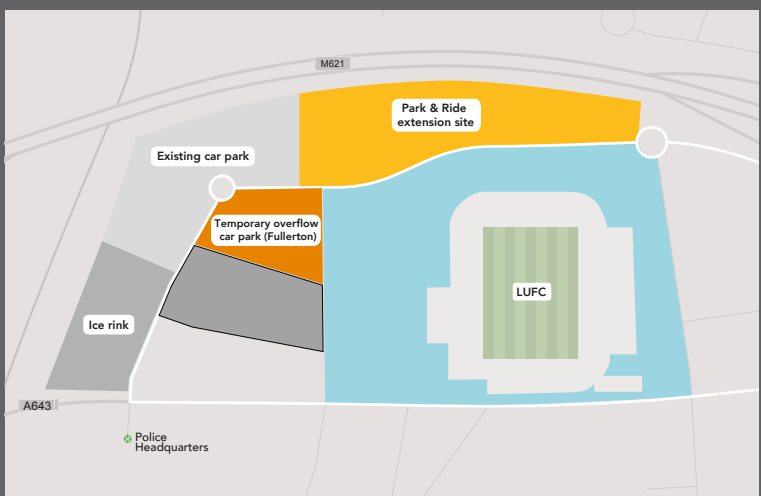

Leeds CITY COUNCIL

Elland Road Park & Ride Extension

Starting May 2019 for completion Summer 2020

Park & Ride has already proven highly successful in reducing the number of cars travelling into the city centre each day. Elland Road is no exception, with the available 800 spaces at full capacity on certain days.

In response to public demand, the Park & Ride site is to be extended to provide an additional 550 spaces. After public consultation, planning permission was granted in January 2019 and BAM Nuttall were appointed as the construction partner. Work is due to start in May 2019.

Hours of construction

Mon-Fri 7.30am-6pm, Sat 7.30am-3pm.
In agreement with construction partners, there will be a requirement to work outside of these hours for short periods - advance notice will be provided when these dates are confirmed. On match days construction will cease several hours before kick-off to reduce disruption.

All construction vehicles will enter the site via Lowfields Road, ensuring minimal disruption to general traffic along Elland Road.

Bus service frequency and routing changes

In order to accomodate more users of the site once complete, we plan to increase bus frequency to every 6-7 minutes at peak times. Buses travelling from the city centre will access the site via a new bus-only access directly off the roundabout at M621 junction 2. This will provide a quicker route back to the Park & Ride and reduce the number of bus movements along Elland Road. Buses travelling from the site to the city centre will continue to travel along Elland Road.

Overflow parking

During construction, a temporary Park & Ride overflow car park will be provided at Fullerton car park - details of which are found on the map on the first page. The temporary car park will have lighting, a flat level surface and designated walking routes. Diversion signage to the Fullerton overflow car park will be in operation during this time.
